

geotechnical instruments

innovative solutions for engineering instrumentation since 1977

- inclinometer systems
- inclinometer casing
- pneumatic piezometers
- vibrating wire piezometers
- tilt meters
- spiral sensors
- extensometers
- crack meters
- jointmeters
- tension measuring gauges
- tunnel profile monitoring systems
- convergence monitors
- datalogging systems & solutions
- multiplexers
- machine monitors
- digital & analog pneumatic readouts
- vibrating wire dataloggers & readouts
- settlement systems
- load and pressure cells
- strain gauges and meters
- environmental pipe products
- oil water interface meters
- pvc pipe wellscreen
- reusable bailers
- thermistor strings
- water level meters
- water well casing
- well sounders
- borehole packers & accessories
- carlson concrete instruments
- analysis software

read, display and log data from
vibrating wire sensors and thermistors

VW2106

**vibrating wire
readout**

the new standard
for reading
vibrating wire sensors

- runs on 3 "AA" batteries
- compact and weatherproof
- portable and lightweight
- stores 170 instrument locations per route
- 20 time/date stamped data points
- "tool-free" transducer inputs
- built-in multiplexer
- on-board speaker for gauge sound
- data transfer to host computer via USB
- compatible with Microsoft® Excel

industry leading inclinometer technology

digital
INCLINOMETER

wireless
communication & digital technology

- internal 24 bit A/D converter for digital data return
- superb resolution, noise immunity and accuracy
- higher level of efficiency over analog systems
- Pocket PC for wireless data collection
- data transfer to host computer via USB
